Data Structure

Fantasy 3 Movies

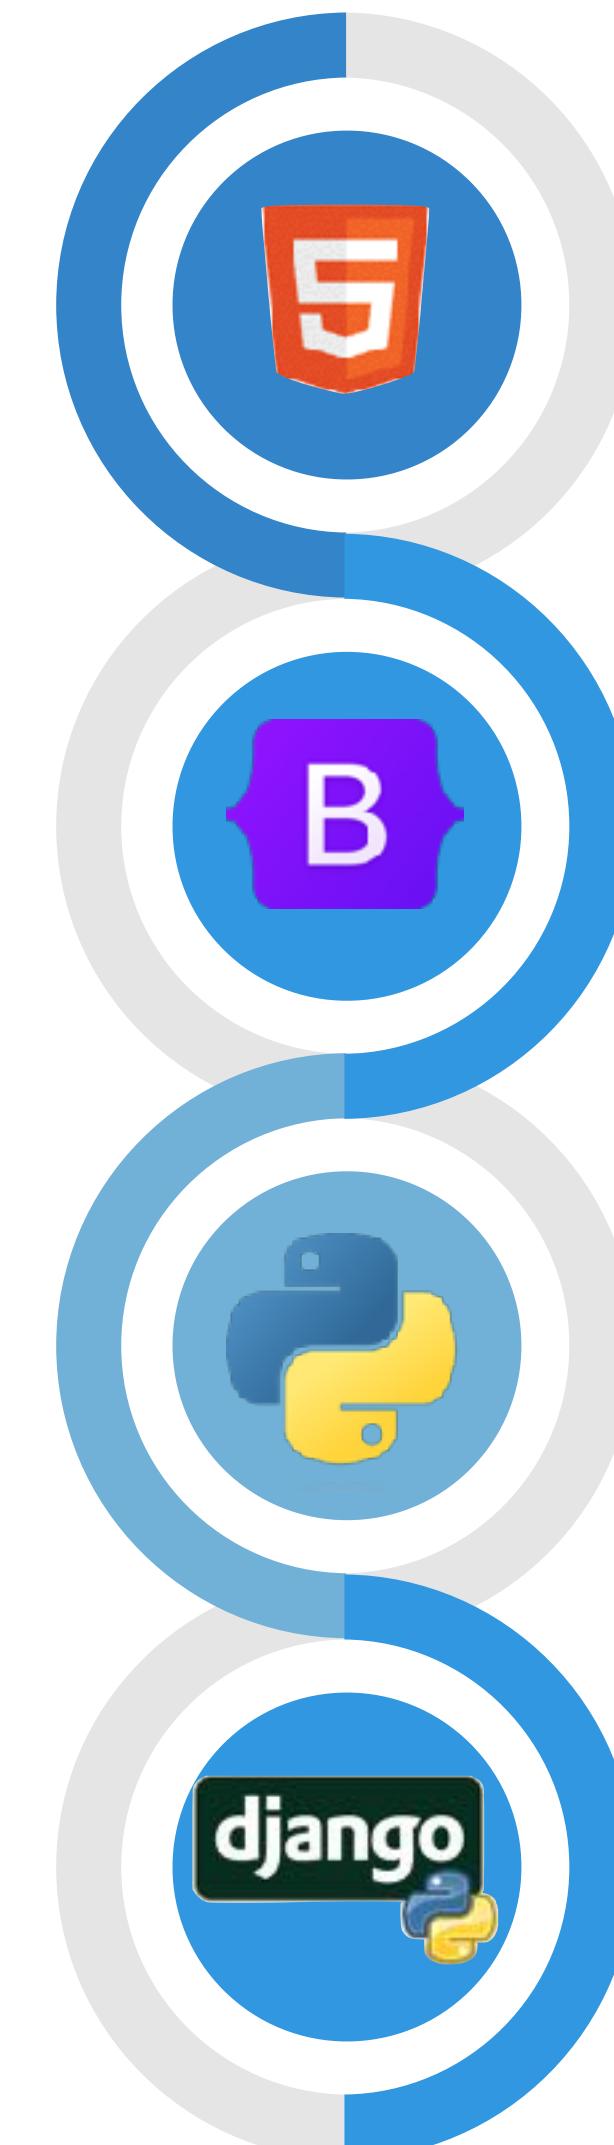

Working Flow

Create Project

A new database and Django project being created is the start of the project.

Login and Authentication

Creating the landing page for the user to log in to authenticate who the user is, is the core of the application.

Models

Once the user authentication process is complete models for the database need to be created for the user to select movies, actors, production team and user comments on their dream movie.

Urls, Views and Templates

After models are created, and data is migrated the Urls, views and templates need to be created for the user to create a movie, add actors and production teams.

CSS

Use CSS and or Bootstrap to style templates.
